com.example.asus.myapplication

Class ErrorActivity

- java.lang.Object
- ○ android.content.Context
  ○ ■ android.content.ContextWrapper
    ■ ■ android.view.ContextThemeWrapper
      ■ ■ android.app.Activity
        ■ ■ android.support.v4.app.FragmentActivity
          ■ ■ android.support.v7.app.ActionBarActivity
            ■ ■ com.example.asus.myapplication.ErrorActivity

- All Implemented Interfaces:
  android.content.ComponentCallbacks, android.content.ComponentCallbacks2,
  android.support.v4.app.ActionBarDrawerToggle.DelegateProvider,
  android.support.v4.app.TaskStackBuilder.SupportParentable, android.view.KeyEvent.Callback,
  android.view.LayoutInflater.Factory, android.view.LayoutInflater.Factory2,
  android.view.View.OnCreateContextMenuListener, android.view.Window.Callback,
  android.view.Window.OnWindowDismissedCallback

```
public class ErrorActivity
extends android.support.v7.app.ActionBarActivity
```

- ○ **Nested Class Summary**

    ■ **Nested classes/interfaces inherited from class android.app.Activity**

    ```
    android.app.Activity.TranslucentConversionListener
    ```

- **Nested classes/interfaces inherited from class android.content.Context**

  ```
  android.content.Context.BindServiceFlags,
  android.content.Context.CreatePackageOptions, android.content.Context.ServiceName
  ```

- **Field Summary**

  - **Fields inherited from class android.app.Activity**

    ```

- - ## Constructor Detail

    - ### ErrorActivity

      ```
      public ErrorActivity()
      ```

  - ## Method Detail

    - ### onCreate

      ```
      protected void onCreate(android.os.Bundle savedInstanceState)
      ```

      Description copied from class: `android.support.v4.app.FragmentActivity`
      Perform initialization of all fragments and loaders.

Overrides:

`onCreate` in class `android.support.v7.app.ActionBarActivity`

Parameters:

`savedInstanceState` - If the activity is being re-initialized after previously being shut down then this Bundle contains the data it most recently supplied in `Activity.onSaveInstanceState(android.os.Bundle)`. ***Note: Otherwise it is null.***

See Also:

`Activity.onStart()`, `Activity.onSaveInstanceState(android.os.Bundle)`,

`Activity.onRestoreInstanceState(android.os.Bundle)`,
`Activity.onPostCreate(android.os.Bundle)`

- **onOptionsItemSelected**

`public boolean onOptionsItemSelected(android.view.MenuItem item)`

Description copied from class: `android.app.Activity`

This hook is called whenever an item in your options menu is selected. The default implementation simply returns false to have the normal processing happen (calling the item's Runnable or sending a message to its Handler as appropriate). You can use this method for any items for which you would like to do processing without those other facilities.

Derived classes should call through to the base class for it to perform the default menu handling.

Overrides:

`onOptionsItemSelected` in class `android.app.Activity`

Parameters:

`item` - The menu item that was selected.

Returns:

boolean Return false to allow normal menu processing to proceed, true to consume it here.

See Also:

```
Activity.onCreateOptionsMenu(android.view.Menu)
```

- **goToHomepage**

  ```
  public void goToHomepage(android.view.View view)
  ```

- **getSupportFragmentManager**

  ```
  public android.support.v4.app.FragmentManager getSupportFragmentManager()
  ```
